OpenAI (GPT-4) Zero-Shot Method

Instructions:

User:

What can be done to help a blind person cross the street safely?

AI:

Helping a blind or visually impaired person cross the street safely is important and requires both awareness and sensitivity to their needs and preferences. Here are several steps and tips on how to assist effectively:

- **Ask First:** Always ask the person if they need help before you act. Never assume assistance is needed or wanted. If they do need help, ask how they would like to be assisted.
- **Offer Your Arm:** If they accept your offer for help, offer your elbow for them to hold onto. This is known as the sighted guide technique. It allows the person to control the level of assistance and feel more secure.
- **Describe the Environment:** Provide clear and concise information about their surroundings, including the width of the street, any curbs, steps, obstacles, or relevant traffic signals. Let them know when it's safe to walk and in which direction.
- **Use Verbal Cues:** Use verbal cues rather than pointing or visual gestures. Phrases like "step up" or "step down" can be helpful when approaching curbs or uneven surfaces.
- **Walk at Their Pace:** Walk at a pace that is comfortable for them, and be mindful of their movements and any cues they give you about their pace or direction preferences.
- **Don't Rush Them:** Allow them to take their time, especially at intersections, where it's crucial to ensure that it's safe to cross.
- **Follow Traffic Signals:** Even if there are no cars coming, it's important to wait for the appropriate traffic signals before crossing. This helps reinforce safe crossing habits.
- **Be Descriptive:** If they are using a guide dog, let the person handle their dog, and do not distract the animal. Instead, offer verbal assistance as needed.

- **Ask About Preferred Side:** Some people may have a preferred side to be guided on, especially if they have some residual vision or if it helps them navigate better.
- **End Assistance Properly:** Once you've reached the other side of the street or their destination, ask where they would like to go next or if they need further assistance. Make sure they are oriented and feel secure before you leave.

Remember, the key is to offer assistance respectfully and follow their lead on how much help they need. Your support can make a significant difference in their mobility and safety.
